AB Dil. dispersions of cationic fabric conditioners in water undergo creaming in the presence of dissolved electrolyte to give concd., readily dispersible creams which have a spherulitic structure and contain 8-50% conditioner and 1-15% electrolyte. The creams are useful, optionally after diln. or addn. to liq. detergent compns., for softening fabrics during laundering or rinsing. A 90% soln. of fabric conditioner (ditallow alkyl imidazolium methosulfate) in iso-PrOH was added to a 5% aq. CaCl<sub>2</sub> soln. at 60.degree., stirred 15 min to give a dispersion contg. 15% conditioner, and aged 7 days to allow a mobile cream to sep. from a clear aq. phase. The cream contained 42.3% solids and 0.9% iso-PrOH.
